LEDGER / PRODUCT–MARKET FIT

Who needs this product enough to switch?

1,000 simulated profiles · needs, alternatives and budget fit

View decision →

Where the problem matters

Each dot = an AI customer · size = budget

ESTIMATED PRODUCT–MARKET FIT

82% Strong signal in a focused market

Illustrative AI estimate · not a calibrated probability

Independent consultants

Weekly invoicing pain · manual workarounds

Recurring need | Clear value | Budget fit

Typical software budget: **$30–$60 / month**

A repeated problem, an existing workaround and a clear reason to switch.

Why the product fits

Recurring problem	84%
Value relevance	79%
Willing to switch	68%

Illustrative responses from the selected AI cohort.

A/B test: which problem resonates?

POSITIONING A
Save time on invoices
54%

POSITIONING B
Get paid on time
78%

Problem resonance in the simulated cohort.

Pricing & launch readiness

$29 / month · price to test

! 1 technical issue
Invoice export failed

Fix the blocker, then confirm the offer with real customers.

AI fit estimates and fictional sessions. No real demand or sales measured.

Market decision · not just a price recommendation

SIMULATION VERDICT

VALIDATED FOR A CUSTOMER PILOT

Best fit: consultants · PMF estimate 82%
Fix export, then validate with real buyers

Run the demo. Inspect the evidence.

Operational notes for reviewers. These pages are outside the 45-second pitch.

Open the presentation and bundled demo

From the repository root:

```
python3 -m http.server 4177 \
  --bind 127.0.0.1 \
  --directory docs/presentation/cohort
```

127.0.0.1:4177 — English PDF & video
127.0.0.1:4177/demo/ — interactive sample

Previously verified demo build

3 / 3 Playwright E2E tests passed.
Study configuration, report export, workspace navigation and mobile layouts.

The bundled demo uses sample personas and deterministic findings. These checks verify the demo journey; they do not validate market demand or live customer recruitment.

Run the current project

```
npm ci
npm run dev
```

Open **http://127.0.0.1:5173/**.

Validate the source and browser journey

```
npm run build
npm run typecheck
npx playwright install chromium
npm run test:e2e
```

Grok Bot integration settings

```
GROK_BOT_WEBHOOK_URL
GROK_BOT_WEBHOOK_KEY
COHORT_PUBLIC_URL
```

Server-side connection settings for the integration under development. A public HTTPS callback and an end-to-end cloud run require separate verification.

The complete product scope. A measurable sales outcome.

The pitch assumes the full Auxos feature set, as requested. Product scope and prototype implementation are tracked separately.

Full feature scope

- ✓ ICP definition & segmentation
- ✓ Real customer interviews
- ✓ Reusable populations
- ✓ Surveys & research studies
- ✓ Pricing optimization
- ✓ Market research
- ✓ Matched customer recruitment
- ✓ One digital twin per person
- ✓ Individual chat & focus groups
- ✓ Concept & prototype tests
- ✓ Usability studies
- ✓ A/B tests

Customer data is the foundation

Match demographics, behavior and company criteria. Ground each twin in one participant's interview data. Organize agents by needs, purchasing power and product context.

Reference: Auxos product page, reviewed November 5, 2026. Scope alignment does not imply a partnership or that Cohort has reproduced Auxos's measured performance.

Validate commercial impact

- Specify the buyer segment, offer, price and expected conversion.
- Run the corresponding experiment with real prospects.
- Measure signups, paid conversion, purchases and revenue.
- Compare predicted intent with observed buying behavior.
- Benchmark validation speed, cost and decision accuracy.

The sales-validation loop is Cohort's proposed commercial workflow. No traction, revenue figures or calibrated conversion accuracy are claimed in this deck. "100×" is a product ambition.

Current prototype boundary

The bundled sample build passed 3/3 E2E tests. The current app uses its sample workspace; new research and calibration modules exist but are not mounted. Real-person recruitment, source-grounded twins and full live Grok execution have not been verified.

Latest source review: November 5, 2026. Earlier missing-import failures are historical; no fresh source test result is claimed here.
